

**CSE485: Introduction to Cognitive Science**  
**Assignment 3**

(DUE: 19-09-2020 Sat midnight) on moodle

1. What are Phantom Vibration Syndrome and Phantom Ringing Syndrome examples of? What might be the underlying reasons that explain the occurrence of these phenomena? Is phantom vibration syndrome an isolated type of experience or an instance of a larger set of phenomena? What does this imply about our contemporary technological situation?
2. Pick any perceptual disorder. Provide a brief description of it. What is impaired? What are potential underlying causes? Is it related to abnormalities in brain structure or function? How is it diagnosed? If it is treatable, what are the available treatments?

Expected length: At least 4 A4 hand-written, scanned pages submitted as pdf named as "YourRollNo\_CogSci\_assign3.pdf"
